

# KETTERING UNIVERSITY ONLINE

---

The 2017-2018 Academic Year celebrates the growth of Online programs through Kettering University Online (<https://online.kettering.edu/?schoolsrc=42786>) (KUO). These courses are offered along with our high quality campus-based graduate programs. All of the Distance Learning programs have transitioned to the Kettering University Online platform.

The Kettering University Online platform places an emphasis on enhanced student interactions, including a professional advisor for support throughout the program. The format for each course has been redesigned to promote more interactivity between students in the classes, as well as live office hours each week with a professor to ensure comprehensive learning. KUO courses are taught in a shorter interval (six and eight week courses). This is an accelerated model that allows adult students to move more quickly and efficiently through their Graduate programs.

Currently, Kettering University Online offers the Master of Science in Lean Manufacturing (<https://online.kettering.edu/programs/masters/lean-manufacturing-masters-online/?%20schoolsrc=42786>) program, the Master of Science in Engineering Management (<https://online.kettering.edu/programs/masters/engineering-management-masters-online?schoolsrc=42786>), and Master of Science in Operations Management (<https://online.kettering.edu/programs/masters/operations-management-masters-degree-online/?schoolsrc=42786>) and the Master of Business Administration (<http://catalog.kettering.edu/grad/programs/business-administration>). Kettering University continues to meet the needs of our students through a range of options that not only employ best practices but continue to offer quality, rigorous programs that align with our reputation as a one of the best Engineering and Business schools in the country.

Thank you for your interest and participation in graduate education at Kettering University.
