

GRADUATE CATALOG

Pursuing a Master's degree from Kettering University puts you in the company of some of the most successful and innovative leaders in a wide range of global industries today. Since 1919, the University has operated with a simple, yet ambitious, goal: train and prepare technical and management talent better than any institution in the country.

Pursuing a Master's degree at Kettering University will prepare you to lead and implement world-changing ideas in industry immediately. You'll work in lab spaces designed with input from major companies; you'll study with faculty who are successful scholars as well as practitioners; and you'll be on a historic campus in Flint, Michigan, where the global auto industry as we know it was born.

Our close and historic relationship with industry has allowed us to continuously adapt to changing needs. In fact, our College of Engineering was created with industry in mind. An advisory board, featuring some of the brightest minds in a wide range of industries, informs our curriculum. We offer programs focused on artificial intelligence, electric vehicles, embedded computer systems, signal process, control systems, robotics, manufacturing and human processes, safety, bioengineering, automotive design, sustainable energy, autonomous development, electric propulsion, powertrain, and more.

The School of Management offers a variety of Master's programs in operations management, engineering management, supply chain management, business administration and technical business administration.
